Windows Firewall

General | Exceptions | Advanced

Your PC is not protected: turn on Windows Firewall

Windows Firewall helps protect your computer by preventing unauthorized users from gaining access to your computer through the Internet or a network.

On (recommended)

This setting blocks all outside sources from connecting to this computer, with the exception of those selected on the Exceptions tab.

Don't allow exceptions

Select this when you connect to public networks in less secure locations, such as airports. You will not be notified when Windows Firewall blocks programs. Selections on the Exceptions tab will be ignored.

Off (not recommended)

Avoid using this setting. Turning off Windows Firewall may make this computer more vulnerable to viruses and intruders.

FIREWALL KAPALI OLMALIDIR.

Scope

- All operations (except notifications of dangerous events)
- Selected operations
 - Saving program settings
 - Exiting the program
 - Stopping/pausing protection components or virus scan tasks

Help

OK | Cancel

Service ayarlarında "Enable Notification" seçili ise virüs yakalandığında kullanıcıya bilgi verir, "Enable Password" kullanıcının antivirüs ayarlarını değiştirmemesi yada kapatmaması için şifre girilmesidir, "Enable Uninstall" kullanıcının Antivirüs uygulamasını kaldırmasını engellemek için şifre korunması sağlar. "Appearance" ise Kaspersky ikonunun görüntülenmesi ile ilgilidir, eğer seçilmezse ikon bilgisayarda görünmez.
